

## Context

- I read many articles, books, profiles, and tweets that I usually have to then share individually with friends & family when I find them interesting
- Instead of going out of my way to share these individually, I want to create a website where I post all of the readings to, this way anyone can open up the website to see the recent stuff I have read

## Overview

- I want to make a website titled The Technology Reading Club
- The website will have tabs separated by:
  - Economics, Companies, Technical, People, Tweets
- Each tab will have a list of either books, articles, tweets that I will add. This will contain the title, author name, link, a rating out of 5 stars, and an optional few sentence review from me
- Each tab for Economics, Companies, Technical, People, Tweets will have a list of the readings linked in a structure almost identical to the one in the screenshot below (in this screenshot, ignore the style, but use the structure)

| Sort by: Rating                                                                                                         |       |                    |
|-------------------------------------------------------------------------------------------------------------------------|-------|--------------------|
| <b>Atlas Shrugged</b><br>Ayn Rand<br>The following month, I worked 100 hour weeks                                       | ★★★★★ | 2024-02            |
| <b>Open</b><br>Andre Agassi<br>Incredible first chapter                                                                 | ★★★★★ | 2023-12            |
| <b>When Breath Becomes Air</b><br>Paul Kalanithi<br>Cried a lot                                                         | ★★★★★ | 2023-04            |
| <b>The Paper Menagerie and Other Stories</b><br>Ken Liu<br>Also cried a lot                                             | ★★★★★ | 2023-02            |
| <b>Stories of Your Life and Others</b><br>Ted Chiang<br>Ted Chiang is one of my favorites                               | ★★★★★ | 2022-12            |
| <b>Shoe Dog</b><br>Phil Knight<br>The ghostwriter for shoe dog and open is excellent                                    | ★★★★★ | 2022-11            |
| <b>The Three-Body Problem</b><br>Cixin Liu                                                                              | ★★★★★ | 2022-06            |
| <b>Foundation Trilogy</b><br>Isaac Asimov                                                                               | ★★★★★ | 2022-04 to 2022-06 |
| <b>The Left Hand of Darkness</b><br>Ursula K. Le Guin<br>Cambridge winter nights didn't feel so bad after reading this. | ★★★★★ | 2022-01            |

- Each of the articles, books, tweets linked will not be specific to technology, rather loosely associated. The general theme of what I read is technology related, but not everything is specific to technology
- Some articles, books, tweets linked should be able to be crossposted across the different tabs depending on if it fits into multiple categories
- Design:
  - heavily emphasized grandiose and bold, but still simple. It should not be digital futuristic.
  - Here is the general theme, this should be what the title of the page looks like:

- On the more technical side, I want the entire project to live in front end code at the moment. So that means that all new title, author name, link, a rating out of 5 stars, and

an optional few sentence review from me will live in the frontend code, it could actually live in a json file which I update, and then the frontend code parses the json file to display each new tweet, book, article
